

****REVISED****
Annual Drinking Water Quality Report 2024
Enlarged Hepzibah PSD
Drawer H
Hepzibah, WV 26369
PWS# WV3301709
November 5, 2025

Why am I receiving this report?

In compliance with the Safe Drinking Water Act Amendments, the **Enlarged Hepzibah Public Service District** is providing its customers with this annual water quality report. This report explains where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. The information in this report shows the results of our monitoring for the period of January 1st to December 31st, 2024 or earlier if not on a yearly schedule.

If you have any questions concerning this report, you may contact **Kevin C. Short, General Manager, Monday through Friday (7:00 AM – 3:30 PM) at 304-623-2217**. If you have any further questions, comments or suggestions, please attend any of our regularly scheduled water board meetings held on the **2nd Monday of every month at 4:30 PM in the Enlarged Hepzibah Public Service District Office, 18 Sable Circle, Reynoldsville, WV 26422**.

Where does my water come from?

Your drinking water source is **purchased** from the Clarksburg Water Board. The Clarksburg Water Board utilizes **surface** water from the West Fork River.

Source Water Assessment

A Source Water Protection Plan was updated in 2023. The intake that supplies drinking water to the **Clarksburg Water Board** has a higher susceptibility to contamination, due to the sensitive nature of surface water supplies and the potential contaminant sources identified within the area. This does not mean that this intake will become contaminated, only that conditions are such that the surface water could be impacted by a potential contaminant source. Future contamination may be avoided by implementing protective measures. The Source Water Protection Plan, which contains more information is available for review at www.clarksburgwater.com/cwb-sourcewaterprotectionplan.pdf or a copy will be provided to you at Clarksburg Water Boards office during business hours or from the WVBPH 304-558-2981.

Why must water be treated?

All drinking water contains various amounts and kinds of contaminants. Federal and state regulations establish limits, controls, and treatment practices to minimize these contaminants and to reduce any subsequent health effect.

Contaminants in Water

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits of contaminants in bottled water which must provide the same protection for public health.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of these contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

The source of drinking water (both tap and bottled water) includes rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of land or through the ground, it dissolves naturally-occurring minerals, and, in some cases radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Inorganic contaminants, such as salts and metals, which can be naturally-occurring, or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, farming.

Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.

Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.

Radioactive contaminants, which can be naturally-occurring or the result of oil and gas production and mining activities.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Water Quality Data

The following tables list all of the drinking water contaminants which were detected during the 2024 calendar year. The presence of these contaminants does not necessarily indicate the water poses a health risk. Unless noted, the data presented in this table is from the testing done January 1- December 31, 2024. The state requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old.

Water Quality Data Table

Definitions of terms and abbreviations used in the table or report:

AL – Action Level, or the concentration of a contaminant which, when exceeded, triggers treatment or other requirements which a water system must follow.

LRAA – Locational Running Annual Average is an average of sample analytical results for samples taken at a particular monitoring location during the previous four calendar quarters.

RAA – Running Annual Average is an average of sample results obtained over the most current 12 months and used to determine compliance with MCLs.

MCL – Maximum Contaminant Level, “Maximum Allowed” or the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technique.

MCLG – Maximum Contaminant Level Goal, or the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

SMCL – Secondary Maximum Contaminant Level, is the recommended level for a contaminant that is not regulated and has no MCL. These are non-enforceable guidelines regarding chemicals that may cause cosmetic or aesthetic effect in drinking water.

MRDL - Maximum Residual Disinfectant Level, or the highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of disinfectant is necessary to control microbial contaminants.

MRDLG - Maximum Residual Disinfectant Level Goal, or the level of drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect benefits of the use of disinfectants to control microbial contaminants.

TT – Treatment Technique, is a required process intended to reduce levels of a contaminant in drinking water

N/A – not applicable

ND – Not Detectable, no contaminants were detected in the sample(s) taken.

NE – not established

NTU – Nephelometric Turbidity Unit, used to measure cloudiness in water is not regulated.

Ppb – parts per billion or micrograms per liter (µg/l)

pCi/L – picocuries per liter (a measure of radioactivity)

mrem/yr – Millirems per Year or a measure of radiation absorbed by the body.

ppm – parts per million or milligrams per liter (mg/l)

MPA – Monitoring Period Average – is an average of sample results obtained during a defined time frame.

SU – Standard Unit

The **Enlarged Hepzibah Public Service District** routinely monitors for contaminants in your drinking water according to federal and state laws. The tables below show the results of our monitoring for contaminant.

Tables of Test Results - Regulated Contaminants Enlarged Hepzibah PSD PWS# WV3301726

Chlorine/Chloramines Maximum Disinfection Level	MPA	MPA Units	RAA	RAA Units
2/1/2024 – 2/29/24	1.6	MG/L	1.00	MG/L

Disinfection Byproducts	Violation Y/N	Highest LRAA	Range (low/high)	Unit of measure	MCLG	MCL	Likely source of Contamination
Haloacetic acids (HAA5) 180 Hillshire Dr.	N	41.5	20 / 55	ppb	NA	60	By-product of drinking water disinfection
*Total trihalomethanes (TTHMs) 180 Hillshire Dr.	N	66.25	25 / 82	ppb	NA	80	By-product of drinking water chlorination

*Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or nervous system, and may have an increased risk of getting cancer.

Un-Regulated Contaminants	Collection Date	Highest Value	Range (low/high)	Unit	SMCL
Orthophosphate	2024	4.08	3.44 – 4.08	ppm	N/A

Lead & Copper - Copper and Lead samples were collected from 20 area residences on June 12 - 14, 2023							
Contaminant	Monitoring Period	90 th Percentile	Range	Unit	AL	Sites Over AL	Likely Source of Contamination
Copper, Free	June 2023	0.0573	0.0012 – 0.229	ppm	1.3	0	Corrosion of household plumbing systems; erosion of natural deposits.
Lead	June 2023	2	<0.5 – 42.6	ppb	15	1	Corrosion of household plumbing systems; erosion of natural deposits

Lead & Copper - Copper and Lead samples were collected from 20 area residences on October 24 - 26, 2023							
Contaminant	Monitoring Period	90 th Percentile	Range	Unit	AL	Sites Over AL	Likely Source of Contamination
Copper, Free	October 2023	0.0293	0.0091 – 0.106	ppm	1.3	0	Corrosion of household plumbing systems; erosion of natural deposits.
Lead	October 2023	0.97	<0.5 – 1.1	ppb	15	0	Corrosion of household plumbing systems; erosion of natural deposits

There is no safe level of lead in drinking water. Exposure to lead in drinking water can cause serious health effects in all age groups, especially pregnant people, infants (both formula-fed and breastfed), and young children. Some of the health effects to infants and children include decreases in IQ and attention span. Lead exposure can also result in new or worsened learning and behavior problems. The children of persons who are exposed to lead before or during pregnancy may be at increased risk of these harmful health effects. Adults have increased risks of heart disease, high blood pressure, kidney or nervous system problems. Contact your health care provider for more information about your risks.

Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. ENLARGED HEPZIBAH PSD is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact ENLARGED HEPZIBAH PSD and DARLENE SWIGER at 304-623-9609. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <https://www.epa.gov/safewater/lead>.

Enlarged Hepzibah PSD has finished identifying service line materials throughout the water distribution supply. There were no Lead, Galvanized needing replacement, or Unknown lines reported. The most up to date inventory is located at our office at 18 Sable Circle, Reynoldsville, WV 26422. If you have further questions about our inventory, please contact Kevin Short at 304-623-2217.

In the 2024 calendar year, Enlarged Hepzibah PSD had NO violation(s) of drinking water regulations.

Some or all of our drinking water is supplied from another water system. The table below lists some of the drinking water contaminants which were detected in 2024. The entire list can be found at www.clarksburgwater.com/

TESTING RESULTS FOR CLARKSBURG WATER BOARD

Tables of test results for regulated contaminants:

EPA's surface water treatment rules require conventional water treatment plants like Clarksburg Water Boards to monitor Turbidity. The NTU must never exceed 1.0 at any time. The samples for turbidity must be less than or equal to 0.3 NTU in at least 95% of the samples in one month. Clarksburg's turbidity samples are in the table below. EPA considers these limits as a TT or Treatment Technique. A Treatment Technique is a required process intended to reduce the level of a contaminant in drinking water.

Turbidity				
Monthly % < 0.3 NTU	Yearly High	Month of Highest Reading	Likely Source of Contaminant	Violation
100 %	0.15 NTU	July	Soil runoff	No
NTU	Nephelometric Turbidity Unit, used to measure cloudiness in water			

The removal of Total Organic Carbon (TOC) is an important process to help control Disinfection By Products created when Chlorine is used as a disinfectant. TOC testing measures the level of organic molecules or contaminants present. TOC tests will not determine which compounds are present, but only the amount of compounds. The results of these tests are in the table below.

Total Organic Carbon (TOC)						
Contaminant	RAA	Range (low/high)	Ideal Goal (MCLG)	Highest Level Allowed (MCL)	Likely Source of Contaminant	Violation
TOC (Source)	2.8 ppm	2.2 / 3.4 ppm	N/A	TT	Naturally occurring in the environment	No
TOC (Finished)	2 ppm	1.5 / 2.4 ppm	N/A	TT	Naturally occurring in the environment	No
RAA	Running Annual Average is an average of sample results obtained over the most current 12 months and used to determine compliance with MCL's.					
TT	Treatment Technique					
ppm	parts per million or milligrams per liter (mg/l)					

Inorganic Contaminants						
Contaminant	RAA	Level Detected or Range	Ideal Goal (MCLG)	Highest Level Allowed (MCL)	Likely Source of Contaminant	Violation
*Arsenic	1 sample 10/10/2024	< 0.001 ppm	0	0.01	Erosion of natural deposits; runoff from orchards; runoff from glass & electronics production wastes	No

Barium	1 sample 10/10/2024	0.03 ppm	2	2	Discharge from drilling wastes, discharge from metal refineries, erosion of natural deposits.	No
Chromium	1 sample 10/10/2024	< 0.0009 ppm	0.1	0.1	Discharge from steel and pulp mills; erosion of natural deposits	No
Fluoride	0.53 ppm	Range 0.21 – 0.97 ppm	4	4	Erosion of natural deposits; water additive that promotes strong teeth; discharge from aluminum and fertilizer plants	No
**Nitrate	1 sample 10/10/2024	0.35 ppm	10	10	Runoff from fertilizer use; erosion of natural deposits	No
Nitrate - Nitrite	1 sample 10/10/2024	0.35 ppm	10	10	Runoff from fertilizer use; erosion of natural deposits	No
RAA	Running Annual Average is an average of sample results obtained over the most current 12 months and used to determine compliance with MCL's.					
ppm	parts per million or milligrams per liter (mg/l)					

*Arsenic in drinking water at levels above the MCL can cause skin damage or problems with circulatory systems.

**Nitrate in drinking water at levels of 10 ppm is a health risk for infants less than six months of age.

National Secondary Drinking Water Regulations are non-enforceable guidelines regarding contaminants that may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. EPA recommends secondary standards to water systems but does not require systems to comply.

Secondary Contaminants			
Contaminant	Level Detected	Unit of Measure	SMCL
Sulfate	45 10/10/2024	ppm	250

In the 2024 calendar year, Clarksburg Water Board had the below noted violation(s) of drinking water regulations.

Date	Number	Type / Name	Compliance Period
11/15/2024	133653	52 / Follow up or Routine Tap M/R (LCR)	1/1/2024-6/30/2024

Reporting issue related to one address.

We have made every effort and taken every precaution to return to compliance.

Unregulated Contaminants						
Contaminant	Date Sampled	Level Detected	Unit of Measure	MCLG	SMCL	Likely Source of Contamination
Bromide	5/1/2024	12	ppb	NA	NA	NA
Chloride	5/1/2024	5.1	ppm	NA	250	NA
*Sodium	10/10/2024	43	ppm	NA	1000	Erosion of natural deposits
Nickle	10/10/2024	< 5	ppb	100	100	Erosion of natural

						deposits
Carbon, Dissolved Organic (DOC)	2024	2.46 Range 1.4 - 4.4	ppm	NA	NA	NA
SUVA (Specific Ultraviolet Absorbance)	2024	2.4 Range 1 – 7.3	L /MG-M	NA	NA	NA
UV Absorbance @254 NM	2024	0.06 Range 0.02-0.182	CM-1	NA	NA	NA

*Sodium is an unregulated contaminant. Anyone having a concern over sodium should contact their primary care provider.

Unregulated Contaminants – Related to Phosphates						
Contaminant	RAA	Level Detected or Range	Ideal Goal (MCLG)	Highest Level Allowed (MCL)	Likely Source of Contaminant	Violation
Orthophosphate (Plant)	3.88 ppm	3.4 – 4.3 ppm	N/A	N/A	N/A	No
Orthophosphate (Distribution)	3.83 ppm	3.12 – 4.15 ppm	N/A	N/A	N/A	No
Alkalinity, Total (Plant)	64.7 ppm	48 – 98 ppm	N/A	N/A	N/A	No
Alkalinity, Total (Distribution)	72.47 ppm	47 – 105 ppm	N/A	N/A	N/A	No
Calcium (Plant)	41.35 ppm	20 – 72.8 ppm	N/A	N/A	N/A	No
Calcium (Distribution)	43.7 ppm	10 – 89.2 ppm	N/A	N/A	N/A	No
Calcium Hardness (Plant)	101.7 ppm	50 – 173 ppm	N/A	N/A	N/A	No
Calcium Hardness (Distribution)	109.67 ppm	20 – 175 ppm	N/A	N/A	N/A	No

Conductivity @ 25C UMHOS/CM (Plant)	299.26 UMHO/ CM	182 – 459 UMHO/CM	N/A	N/A	N/A	No
Conductivity @ 25C UMHOS/CM (Distribution)	314.38 UMHO/ CM	193 – 457 UHMO/CM	N/A	N/A	N/A	No
PH (Plant)	7.99 SU	7.8 – 8.36 SU	N/A	N/A	N/A	No
PH (Distribution)	7.95 SU	7.6 – 8.6 SU	N/A	N/A	N/A	No
Temperature, Centigrade (Plant)	66.19 F	43 – 82 F	N/A	N/A	N/A	No
Temperature, Centigrade (Distribution)	67.28 F	53 – 82 F	N/A	N/A	N/A	No

AVAILABILITY OF MONITORING DATA FOR UNREGULATED CONTAMINANTS

Our water system has sampled for a series of unregulated contaminants. Unregulated contaminants are those that do not yet have a drinking water standard set by the US Environmental Protection Agency (EPA). The purpose of monitoring for these contaminants is to help EPA decide whether the contaminants should have a standard. As our customers, you have a right to know that this data is available.

If you are interested in examining the results, please contact: Jason Myers at 304-623-3711.

Additional Information – Enlarged Hepzibah Public Service District

All other water test results for the reporting year 2024 were all non-detects.

The West Virginia Bureau for Public Health performed a Sanitary Survey on February 3, 2023 and no significant deficiencies were reported

This report will not be mailed. A copy will be provided to you upon request at our office during regular business hours. It can also be viewed on our website, enlargedhepzibahpsd.com or at the following link: <https://tinyurl.com/ehepsdccb>.

PLEASE SHARE THIS REPORT WITH OTHER PEOPLE WHO DRINK THIS WATER, ESPECIALLY THOSE WHO DO NOT RECEIVE THIS INFORMATION DIRECTLY. (FOR EXAMPLE, RESIDENTS IN APARTMENT BUILDINGS, NURSING HOMES, SCHOOLS AND BUSINESSES.
